

# TRUEGAZE VR ANALYSIS

## PRODUCT DESCRIPTION

## Features

- Manage experiments with web browsers
- Support 360 image and video
- Create immersive experiments with VR HMD
- Automatic software upgrade

## TECHNICAL SPECIFICATION

|                         |                                                                                                                                   |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| Components              | <ul style="list-style-type: none"> <li>• SDK and Unity/Unreal Plug-in</li> <li>• Base station &amp; Controller(option)</li> </ul> |
| Support HMD             | VIVE/VIVE Pro                                                                                                                     |
| Supported contents type | <ul style="list-style-type: none"> <li>• 2D image &amp; video</li> <li>• 360 image &amp; video</li> </ul>                         |
| Accuracy                | 0.5°                                                                                                                              |
| FPS                     | 100fps                                                                                                                            |
| Experiment Management   | <ul style="list-style-type: none"> <li>• Real-time experiment monitoring</li> <li>• Multi experiment management</li> </ul>        |
| Calibration             | 9 points                                                                                                                          |
| Record                  | <ul style="list-style-type: none"> <li>• Gaze data</li> <li>• Live gaze view</li> </ul>                                           |
| Analyze                 | <ul style="list-style-type: none"> <li>• Gaze replay, Heat map, Scan Path</li> <li>• Dynamic AOI</li> </ul>                       |
